Subject: First Quarter 2005 Groundwater Monitoring Report, Former Rio Dell Texaco, 100 Wildwood Avenue, LOP No. 12691

Introduction

Here is the First Quarter 2005 Groundwater Monitoring Report for the Former Rio Dell Texaco, Rio Dell, Humboldt County, California. This report includes a brief discussion on the background of the site, field activities, groundwater monitoring results, and discussion and recommendations. This work is being performed at the request of the Humboldt County Division of Environmental Health.

Vicinity Information

The site is located at 100 Wildwood Avenue in Rio Dell, Humboldt County California, at the northeast corner of the intersection of Wildwood Avenue and Edwards Drive (Figure 1). A site plan is included as Figure 2.

Background

In December 1990, a 200-gallon waste oil Underground Storage Tank (UST) was removed from the site and contaminated soils were excavated from the vicinity of the UST in August 1992. In November 1996, the HCDEH issued a remedial action completion certificate for the waste oil UST (LACO, 1998).

In September and October 1998, Northcoast Environmental Construction removed six USTs from the site. Low concentrations of petroleum hydrocarbons were detected in several soil samples from the excavation cavities (LACO, 1998). In February 2000, LACO Associates (LACO) installed six soil borings (B-1 through B-6) and four monitoring wells (MW-1 through MW-4) at the site, and initiated quarterly groundwater monitoring and sampling (LACO, 2000).

In 2001, LACO performed a sensitive receptor survey for a 1,000-foot radius from the site. Two active wells were located within the search area; one well was reportedly used for irrigation, and the other for domestic use and irrigation. Both wells are located cross-gradient of the site (LACO, February 2002).

In March and April 2002, LACO installed eight additional soil borings / temporary well points (B-7 through B-14) at the site (LACO, June 2002).

In January 2004, LACO installed four additional soil borings / temporary well points (B-15 through B-18) at the site (LACO, 2004).

Historic groundwater monitoring data collected by LACO is included in Attachment 1.

Field Activities

Monitoring Well Sampling

On February 11, 2005, SHN conducted quarterly groundwater monitoring of site monitoring wells. Prior to sample collection, each well was checked for free product (none was observed), and measured for depth to groundwater to the nearest 0.01 foot, utilizing an electronic water sensor. Approximately three casing volumes of water were purged from three monitoring wells, using a disposable bailer. Electrical conductivity, pH, and temperature were monitored periodically during purging activities using portable instrumentation. Each groundwater well was also monitored for Dissolved Oxygen (DO), Oxidation-Reduction Potential (ORP), and Dissolved Carbon Dioxide (DCO_2).

Groundwater samples were collected from the three monitoring wells, using disposable polyethylene bailers, and transferred into laboratory-supplied bottles. The water samples were then labeled, stored in an iced cooler, and transported to the analytical laboratory under proper chain-of-custody documentation. Groundwater monitoring data sheets are included in Attachment 2.

Laboratory Analysis

Each groundwater sample was analyzed for Total Petroleum Hydrocarbons as Gasoline (TPHG), Benzene, Toluene, Ethylbenzene, and total Xylenes (BTEX), Methyl Tertiary-Butyl Ether (MTBE), Tertiary-Butyl Alcohol (TBA), Diisopropyl Ether (DIPE), Ethyl Tertiary-Butyl Ether (ETBE), and Tertiary-Amyl Methyl Ether (TAME) in general accordance with United States Environmental Protection Agency (EPA) Method No. 8260B.

Groundwater samples were submitted to North Coast Laboratories, Inc., of Arcata, California.

Equipment Decontamination Procedures

All small equipment that required on-site cleaning was cleaned using the triple wash system. The equipment was first washed in a water solution containing Liquinox® cleaner, followed by a water rinse, then by a second distilled water rinse.

Investigation-Derived Waste Management

Water used in the decontamination of equipment, tools, and all purge water was contained in approved DOT 17 E/H, 55-gallon drums. The water was transported to SHN's purge water storage facility and will be discharged, under permit, to the City of Eureka Wastewater collection system. A total of 21 gallons of water were generated during this monitoring event. A discharge receipt will be included in the next quarterly monitoring report.

Groundwater Monitoring Results

Hydrogeology

Depth to groundwater measurements were collected on February 11, 2005. The direction of groundwater flow on February 11, 2005, was to the south-southeast with an approximate gradient of 0.1 (Figure 3). Groundwater elevations are presented in Table 1. Historic groundwater elevation data collected by SHN is included in Attachment 3.

3. The gasoline values are primarily from the reported gasoline additives.
4. <: Denotes a value that is "less than" the method detection limit.

Natural Attenuation Parameters

DO, ORP, and DCO_2 were measured in the monitoring wells prior to sampling. Results are presented in Table 3. DO concentrations were similar in all wells and indicate slightly aerobic conditions. The DCO_2 measurements from MW-4 were higher than in MW-3, indicating that biodegradation of petroleum hydrocarbons is occurring. ORP measurements were less in MW-4 when compared to MW-3. This is the expected trend during biodegradation of petroleum hydrocarbons. Historic DO, ORP, and DCO_2 measurement results collected by SHN are included in Attachment 3.

Discussion and Recommendations

- TPHG was detected in groundwater samples from monitoring wells MW-1 and MW-4.
- Fuel oxygenates were detected in groundwater samples from monitoring wells MW-1, MW-2, and MW-4.
- Motor oil range hydrocarbons were detected in the groundwater sample from monitoring well MW-2 at a concentration of 210 ug/L.
- No petroleum hydrocarbon constituents were detected in the groundwater sample from monitoring well MW-3.

As approved by the HCDEH, SHN is evaluating an in situ remediation option for the site. SHN has submitted a work plan to the HCDEH that discusses the work to be conducted at the site for the evaluation.

SHN recommends continued groundwater monitoring. Prior to groundwater sampling, wells will be checked for depth to water, and monitored for DO, DCO_2, and ORP. Wells will be purged of approximately three well casing volumes prior to sampling. During well purging, groundwater will be monitored for temperature, pH, and conductivity. Groundwater samples will be analyzed for TPHG, BTEX, and fuel oxygenates.

SHN will complete and submit the next quarterly monitoring report, no later than 60 days following the quarterly sampling event. The report will include a description of the monitoring and sampling activities, a summary of results, analytical reports, groundwater elevations, and groundwater contour maps. The next quarterly groundwater monitoring event is scheduled for May 2005.

DESCRIBE EQUIPMENT USED FOR HAULING, SPREADING, WATERING, CONDITIONING, & COMPACTING

0848	arrived at site located all 4 wells then removed lids and caps, MW-4 had water in flush mount, bailed out, no locks on wells, pulled LACO's dedicated 1/4" poly tubing out of all 4 wells.
0919	I started taking water levels decoming the sounder after each well by scrubbing it with liquinet then rinsing it with DI water.
0934	I started taking total depth on each well with a tape measure.
0939	I started taking DO Readings.
1012	I started purging MW-3 with a disposable bailer, purge water was caught in a graduated 4 gal. bucket.
1040	I started purging MW-2 with a disposable bailer, purge water was caught in a graduated 4 gal. bucket.
1105	I sampled MW-3 secured well with cap and lid.
1114	I started purging MW-1 with a disposable bailer, purge water was caught in a graduated 4 gal. bucket.
1135	I sampled MW-2, secured well with cap and lid.
1143	I started purging MW-4 with a disposable bailer, purge water was caught in a graduated 4 gal bucket.
1210	I sampled MW-1, secured well with cap and lid
1225	I sampled MW-4, secured well with cap and lid.
1238	OFF SITE
Note	All decon water and purge water was caught in 5 gal. buckets with lids then transported to SHNs 1,000 gal. PWST located at 812 W. Wabash Avenue Eureka, CA 21 gallons total.
